PROJECTS

Disease Prediction github.com/RatheeshS316/disease-prediction

A web-based disease prediction solution to help farmers identify diseases affecting plant leaves, fruits, and vegetables. The system detects potential crop diseases from affected plant images and provides useful disease-related information to support early identification and better crop management.

Lost & Found github.com/RatheeshS316/lost-found

A web-based Lost & Found platform that allows users to report lost products and upload details about found products. When a product is reported as lost or found, relevant users can discover matching listings through the platform, helping connect people with their missing belongings.

Legal Metrology AI Sentinel github.com/RatheeshS316/ecommerce-product-checker

Under Development

A mobile-first, AI-powered compliance platform that uses OCR, Computer Vision, and NLP to detect label mismatches, tampered products, and price manipulation through anomaly detection. The platform automatically generates standardized complaints and provides risk-scored, auditable dashboards for regulators and marketplaces.
